Lab Assignments 5

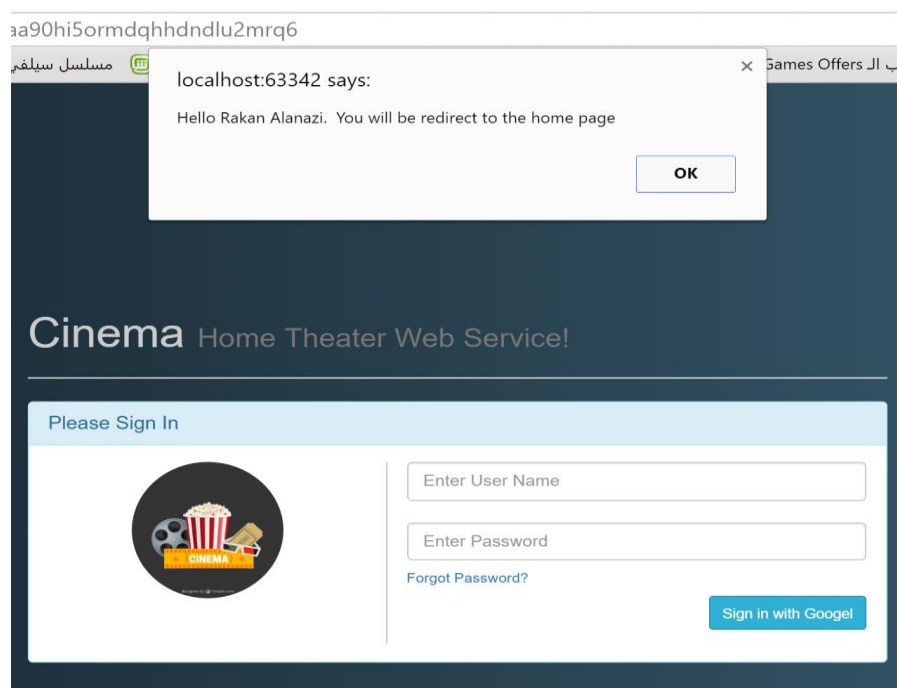

Description:

I create a mashup application using two web services (Foursquare and Alchemy). User can login in with his google account. The website will detect the user location and show him the closest movies theaters to him.

Screenshots:

- **Login Page**

- 1- Log in with google account.
- 2- Alter message will show up, and you will be directed to the home page.

- **Home Page**

Based on your current location, you will get result of nearby movies theaters. Click on one of the theater, and sentiment analysis of most recent review will show up.

Sentiment Analysis From Using Alchemy API

Most recent review	Such a very clean and friendly theatre! With it being my first time, they were more than willing to show me around and help if needed. Love! Oh, and the popcorn is delicious!
Sentiment of the review	positive
Sentiment Score of the review	0.826101
